Do gender and personality traits (BFI-10) influence trust? A replication <i>František Sudzina</i>	47

EDITORIAL

Dear readers,

We are pleased to be able to bring you another edition of the CEJM journal with a report from the ISCOBEMM 2016 conference, which was held over the course of 2016. The central theme of the conference was the current topic of “Industry 4.0”. All of our articles are directly connected to this theme and focus on the development of the entrepreneurial environment and associated trends in business development. The articles not only look at the entrepreneurial environment from the perspective of political influences, but also from qualitative ones. This edition also presents themes associated with socio-economic influences on the entrepreneurial environment and the potential of open data for high-quality decision-making in business. This edition of the CEJM journal emerges from the work presented as part of the conference, though thanks to the participants’ recommendations and the journal’s subsequent review process, the articles were reworked into their present form for publication.

In the future, we would also like to dedicate special editions of this journal to specific presentations of current management issues from conferences. We hope that this new edition will be of interest to you and that you will share with us new research findings in both the future editions of our journal and personally at conferences dedicated to management.
